

Session 7 JOIN exercises

Use the chinook database

- 1. print out the titles of the artist whose ArtistId is 50, in a second column, print also the name of the artist
- 2. print out the track name and albums title of the first 20 tracks in the tracks table
- 3. for the first 12 sales, print what are the names of the track sold, and the quantity sold
- 4. print the names of top 5 tracks sold, and how many times they were sold
- 5. Provide a query showing the Invoices of customers who are from Brazil.
--The resultant table should show the customer's full name, Invoice ID, Date of the invoice and billing country.
- 6. Provide a query that shows the invoices associated with each sales agent. The resultant table should include the Sales Agent's full name.
- 7. Provide a query that shows the Invoice Total, Customer name, Country and Sale Agent name for all invoices and customers.
- 8. Looking at the Invoice items table, provide a query that COUNTs the number of line items for Invoice ID 37.
- 9. Looking at the Invoice items table, provide a query that COUNTs the number of line items for each Invoice. HINT: GROUP BY
- 10. Provide a query that shows all the Tracks, but displays no IDs. The resultant table should include the Album name, Media type and Genre.
- 11. Provide a query that shows all Invoices but includes the # of invoice line items.

--12. If an employee reports to a manager, the value of the ReportsTo column of the employee's row is equal to

--the value of the EmployeeId column of the manager's row.

--In case an employee does not report to anyone, the ReportsTo column is NULL.

-- Get the information on who is the direct report of whom.

--13. Modify the previous query to also show employees who do not report to anyone

--14. Modify the query showing employees and people who are reporting them

--including employees who are at the bottom level of the hierarchy

--15. List people who are not a Manager: show that there is no one who reports them

--16. Find the employees located in the same city
