

Session 7 Practice

Use the chinook database

- 1. Provide a query that includes the track name with each invoice line item.
- 2. Provide a query that includes the purchased track name AND artist name with each invoice line item.
- 3. Provide a query that shows the total number of tracks in each playlist. The Playlist name should be included on the resultant table.
- 4. Provide a query that shows the Sales Agent for each customer
 - You need the employee ID, employee full name and the customer a.CustomerId
 - sort by the customer ID to facilitate the check of your work
- 5. Find the Sales Agent name, the invoice ID and the 'total' for each invoice
- 6. Find for each invoice the name of the Sales Agent, the total and the Invoice Year
- 7. Find the customers located in the same city, get their country, city and full name
- 8. Find a query that returns the name and the purchase count of each track
 - sort in descending order by the count
- 9. Find a query that returns the name and the purchase count of each track in 2013
 - sort in descending order by the count
- 10. Find a table with Composer's name and the number of Invoice lines associated to them
 - Sort the table by the number of songs sold in descending order.
 - Avoid songs without composer (IS NOT NULL)
- 11. Find a table with media types and number of invoice lines
 - where the track is associated to this media type.
- 12. Find a query that returns the table for each invoice line:
 - the Invoice ID, the Track ID and the Genre ID
