

Session 7 Subqueries (Ex 17-27)

Use the chinook database

--17. Provide a query that shows total sales (count and sum) made by each sales agent.

--HINT: first you can create a query to find the name, the invoice ID and the 'total' for each Sales Agent

--and you can use this table for the aggregate functions

--18. Which sales agent made the most in sales over all? And what amount?

--HINT1: First create a table with Sales Agent name and the invoice total for each invoice

--HINT2: summarize the total by Sales Agent

--HINT3: order by total sales and limit to 1

--19. Which sales agent made the most in sales in 2009? Show also the total of his/her sales

--HINT1: first find for each invoice the name of the Sales Agent, the total and the Invoice Year

--HINT2: summarize the total only for Year 2009

--HINT3: order by total sales and limit to 1

--20. Provide a query that shows the # of customers assigned to each sales agent (ID and Full name)

--HINT1: First find the Sales Agent (with ID and Full name) for each customer

--HINT2: After, it's a count of customers by Agent

--21. Provide a query that shows the total sales per country.

-- Show in a separate column which country's customers spent the most?

'This country's customers spent the most' as Answer

--22. Provide a query that shows the 5 most purchased track ever.

--23. Provide a query that shows the most purchased track ever.

--24. Provide a query that shows the most purchased track of 2013.

--25. Provide a query that shows the top 3 best selling artists.

--HINT1: First find a table with Composer's name and the number of Invoice lines associated to them

--HINT2: NULL is not the most popular composer

--25. Provide a query that shows the most purchased Media Type.

--HINT: First create a table with media types and number of invoice lines

--where the track is associated to this media type.

--Check NULLs if needed

--26. How many Invoices were there in 2009 and 2011? What are the respective total sales for each of those years?

--HINT: You may need to extract the year from the invoice date and add to the invoices table first

--27. Provide a query that shows the number tracks purchased in all invoices that contain more than one genre.

--HINT1: First Find a query that returns the table for each invoice line: the Invoice ID, the Track ID and the Genre ID

--HINT2: Count the different genre IDs by invoice

--HINT3: Filter for counts ≥ 2 , and finally count again
