

Session 8 Exercises

--0. Create a new database

--1. Insert a new table called Exercise0, including two columns, ExerciseID and ExerciseName.

--The primary key of the table is ExerciseID, which is an integer, cannot be NULL, and must be unique.

--The name is text, cannot be longer than 25 characters.

--2. Insert a new table called Exercise, including two columns, ExerciseID and ExerciseName.

--The primary key of the table is ExerciseID, which is an integer, cannot be NULL, and must be unique.

--The name is text, cannot be longer than 25 characters.

--3. Delete table Exercise0.

--4. Insert a new table called Question, including three columns, QuestionID, ExerciseID, and QuestionText.

--The primary key of the table is QuestionID, which is an integer, cannot be NULL, and must be unique.

--The ExerciseID is a foreign key (see table Exercise), QuestionText is text, cannot be longer than 125 characters.

--5. Insert a table called Answer, including 6 columns, QuestionID, Answer1, Answer2, Answer3, Answer4, and Points.

--Answer is a weak entity and depends on Question.

--Answer1, Answer2, Answer3, Answer4 are text, cannot be longer than 75 characters,

--Answer1 and Answer2 cannot be NULL, Points is integer and cannot be NULL.

-- Check the diagram: how the tables are related

--6. Insert at least three rows in each table

--Pay attention to relationships, primary and foreign keys to keep integrity.
